

▮ How to Run Your Chatbot Application on Your Computer

Welcome! This guide will help you run the chatbot application on your Windows or Mac computer. Don't worry if you've never done anything like this before - we'll walk through every step together in simple terms.

▮ What You Received

You downloaded a ZIP file that contains:

- `icarus-cdk-danner/` folder - This contains the backend code (the "brain" of the chatbot that runs on Amazon's servers)
- `streamlit-app/` folder - This contains the chatbot interface (the part you'll run on your computer)

Think of it like this: The backend is already running in the cloud (like Gmail runs on Google's servers). You just need to run the **chatbot interface** on your computer to connect to it.

▮ For Windows Users

Step 1: Extract (Unzip) the Downloaded File

1. **Find the ZIP file** you downloaded (probably in your "Downloads" folder)
2. **Right-click** on the ZIP file
3. **Select "Extract All..."**
4. Choose where to save it (your **Desktop** is a good choice)
5. Click **"Extract"**

You'll now see a new folder on your Desktop with all the files inside.

Step 2: Install Python (The Programming Language)

Python is like Microsoft Word for documents, but for running code. We need it to run the chatbot.

1. **Open your web browser** (Chrome, Edge, Firefox, etc.)
2. **Go to this website:** <https://www.python.org/downloads/>

3. You'll see a big yellow button that says **"Download Python 3.13.0"** (or similar number)
 - Click that button to download
4. **Wait for the download to finish** (it's about 25MB, takes 1-2 minutes)
5. **Find the downloaded file** (usually in your "Downloads" folder)
 - It will be named something like `python-3.13.0-amd64.exe`
6. **Double-click** the downloaded file to start installing
7. **IMPORTANT:** On the first screen, you'll see two checkboxes at the bottom:
 - ✓ **CHECK the box that says "Add python.exe to PATH"** (this is very important!)
 - ✓ **CHECK the box that says "Install launcher for all users"**

These checkboxes let you use Python from anywhere on your computer. [\[1\]](#) [\[2\]](#)
8. Click the big **"Install Now"** button
9. **Enter your computer password** if asked
10. Wait for installation (takes 2-3 minutes)
11. When you see **"Setup was successful"**, click **"Close"**

✓ **Verify Python is Installed**

Let's make sure Python installed correctly:

1. Click the **Start button** (Windows logo in bottom-left corner)
2. Type **"cmd"** in the search box
3. Click **"Command Prompt"** (it's a black window icon)
4. In the black window that opens, type this and press Enter:

```
python --version
```

5. You should see something like: `Python 3.13.0`

If you see the Python version, congratulations! Python is installed! 🎉

If you see an error: Close the Command Prompt, restart your computer, and try Step 4 again.

Step 3: Find Your Chatbot Folder

1. **Open File Explorer** (click the folder icon in your taskbar, or press Windows Key + E)
2. **Navigate to where you extracted the files** (probably your Desktop)
3. **Open the main folder** (it might be called something like `project-files` or `chatbot-app`)
4. **Find the `streamlit-app` folder** inside and open it
5. You should see files like:
 - `app.py`

- requirements.txt
- Maybe other files like .py files

This is your chatbot application folder! Remember where this is.

Step 4: Open Command Prompt in Your Chatbot Folder

This is where we'll run commands to start your chatbot.

1. With the streamlit-app folder open in File Explorer:
2. **Click on the address bar** at the top (where it shows the folder path like C:\Users\YourName\Desktop\streamlit-app)
3. **Type "cmd"** in the address bar and press Enter
4. A **black Command Prompt window** will open, already pointing to your chatbot folder!
You should see something like: C:\Users\YourName\Desktop\streamlit-app>

Tip: Keep this window open - we'll use it in the next steps!

Step 5: Install Required Libraries

Your chatbot needs additional "tools" (called libraries) to work. Think of these like plugins for Microsoft Word.

1. In the **Command Prompt window** (from Step 4), type this command exactly as shown and press Enter:

```
pip install -r requirements.txt
```

2. You'll see a lot of text scrolling by - **this is normal!** Python is downloading and installing everything needed.
3. This takes **2-5 minutes** depending on your internet speed
4. When it's done, you'll see something like:

```
Successfully installed streamlit-1.39.0 requests-2.32.3 ...
```

If you see errors: Make sure you're in the correct folder (the one with requirements.txt file). Type dir and press Enter to see what files are in your current folder.

Step 6: Start Your Chatbot! 🚀

Almost there! Now let's start the chatbot.

1. In the **same Command Prompt window**, type this command and press Enter:

```
streamlit run app.py
```

2. You'll see some text appear, including lines like:

```
You can now view your Streamlit app in your browser.
```

```
Local URL: http://localhost:8501
```

```
Network URL: http://192.168.1.5:8501
```

3. **Your web browser will automatically open** and show the chatbot!

If it doesn't open automatically:

- Copy this address: `http://localhost:8501`
- Paste it into your web browser's address bar
- Press Enter

🎉 **Congratulations! Your chatbot is now running!**

How to Use Your Chatbot

1. You'll see the chatbot interface in your web browser
2. Type your questions in the text box
3. Press Enter or click Send
4. The chatbot will respond!

How to Stop the Chatbot

When you're done using it:

1. **Go back to the Command Prompt window** (the black window)
2. Press **Ctrl + C** on your keyboard
3. Type **"y"** and press Enter when asked
4. You can now close the Command Prompt window

How to Start It Again Later

Important: You need to run the chatbot every time you want to use it. Here's how:

1. **Open File Explorer** and go to your `streamlit-app` folder
2. **Click the address bar**, type **"cmd"**, and press Enter
3. In the Command Prompt window that opens, type:

```
streamlit run app.py
```

4. Press Enter and wait for your browser to open

That's it! You don't need to install Python or the libraries again - only the first time.

▮ For Mac Users

Step 1: Extract (Unzip) the Downloaded File

1. **Find the ZIP file** you downloaded (probably in your "Downloads" folder)
2. **Double-click** the ZIP file - Mac will automatically extract it
3. **Drag the extracted folder** to your **Desktop** for easy access

Step 2: Install Python (The Programming Language)

Python is like Pages for documents, but for running code. We need it to run the chatbot.

Option A: Install from Python.org (Easiest for Beginners)

1. **Open Safari** (or your preferred web browser)
2. **Go to this website:** <https://www.python.org/downloads/>
3. You'll see a big yellow button that says "**Download Python 3.13.0**" (or similar number)
 - Click that button to download
4. **Wait for the download to finish** (about 40MB, takes 2-3 minutes)
5. **Find the downloaded file** (in your "Downloads" folder)
 - It will be named something like `python-3.13.0-macos11.pkg`
6. **Double-click** the file to start installing
7. Click "**Continue**" through the screens
8. Click "**Install**" when prompted
9. **Enter your Mac password** when asked
10. Wait for installation (takes 2-3 minutes)
11. When you see "**The installation was successful**", click "**Close**"

✓ **Verify Python is Installed**

Let's make sure Python installed correctly:

1. **Open Spotlight Search:**
 - Press **Command (⌘) + Spacebar**
 - Or click the magnifying glass  in the top-right corner
2. Type "**Terminal**" and press Enter
3. A window with white or black background will open - this is Terminal
4. Type this command and press Enter:

```
python3 --version
```

5. You should see something like: Python 3.13.0

If you see the Python version, congratulations! Python is installed! [\[3\]](#) [\[4\]](#)

If you see an error: Restart your Mac and try Step 4 again.

Step 3: Find Your Chatbot Folder

1. **Open Finder** (click the smiley face icon in your Dock)
2. **Navigate to where you extracted the files** (probably your Desktop)
3. **Open the main folder** (it might be called something like `project-files` or `chatbot-app`)
4. **Find the `streamlit-app` folder** inside and open it

5. You should see files like:

- `app.py`
- `requirements.txt`
- Maybe other files with `.py` extension

This is your chatbot application folder! Remember where this is.

Step 4: Open Terminal in Your Chatbot Folder

This is where we'll run commands to start your chatbot.

1. With the `streamlit-app` folder open in Finder:
2. **Right-click** (or Control-click) on the `streamlit-app` folder
3. Select **"New Terminal at Folder"**

If you don't see this option:

- Open **Terminal** (press Command + Spacebar, type "Terminal", press Enter)
- Type `cd` (that's "`cd`" followed by a space)
- **Drag the `streamlit-app` folder** from Finder into the Terminal window
- Press Enter

4. You should see something like:

```
YourName@MacBook-Pro streamlit-app %
```

Keep this Terminal window open! We'll use it in the next steps.

Step 5: Install Required Libraries

Your chatbot needs additional "tools" (called libraries) to work. Think of these like plugins for Pages.

1. In the **Terminal window** (from Step 4), type this command exactly as shown and press Enter:

```
pip3 install -r requirements.txt
```

2. You'll see a lot of text scrolling by - **this is normal!** Python is downloading and installing everything needed.
3. This takes **2-5 minutes** depending on your internet speed
4. When it's done, you'll see something like:

```
Successfully installed streamlit-1.39.0 requests-2.32.3 ...
```

If you see errors about permissions: Try this command instead:

```
pip3 install --user -r requirements.txt
```

If you see "command not found": Make sure you used `pip3` (with a "3") not just `pip`.

Step 6: Start Your Chatbot! 🚀

Almost there! Now let's start the chatbot.

1. In the **same Terminal window**, type this command and press Enter:

```
streamlit run app.py
```

Note: If that doesn't work, try:

```
python3 -m streamlit run app.py
```

2. You'll see some text appear, including lines like:

```
You can now view your Streamlit app in your browser.
```

```
Local URL: http://localhost:8501
```

```
Network URL: http://192.168.1.5:8501
```

3. **Your web browser (Safari) will automatically open** and show the chatbot!

If it doesn't open automatically:

- Copy this address: `http://localhost:8501`
- Paste it into Safari's address bar
- Press Enter

🎉 **Congratulations! Your chatbot is now running!**

How to Use Your Chatbot

1. You'll see the chatbot interface in your web browser
2. Type your questions in the text box
3. Press Enter or click Send
4. The chatbot will respond!

How to Stop the Chatbot

When you're done using it:

1. **Go back to the Terminal window**
2. Press **Control + C** on your keyboard (not Command!)
3. The chatbot will stop running
4. You can close the Terminal window

How to Start It Again Later

Important: You need to run the chatbot every time you want to use it. Here's how:

1. **Open Finder** and go to your `streamlit-app` folder
2. **Right-click** the folder and select **"New Terminal at Folder"**
3. In the Terminal window that opens, type:

```
streamlit run app.py
```

4. Press Enter and wait for Safari to open

That's it! You don't need to install Python or the libraries again - only the first time.

? Troubleshooting Common Issues

"Python is not recognized" or "command not found"

Problem: Python wasn't installed correctly or isn't in your PATH.

Solution:

- **Windows:** Uninstall Python, then reinstall it. Make sure to check "Add python.exe to PATH" during installation^[2] ^[1]
- **Mac:** Make sure you're using `python3` (with a "3") instead of `python`^[3]

"No module named 'streamlit'"

Problem: The libraries didn't install correctly.

Solution:

1. Make sure you're in the `streamlit-app` folder (check Step 4)
2. Run the install command again:
 - Windows: `pip install -r requirements.txt`
 - Mac: `pip3 install -r requirements.txt`

"requirements.txt not found"

Problem: You're in the wrong folder.

Solution:

1. In your command window, type `dir` (Windows) or `ls` (Mac) and press Enter
2. You should see a file called `requirements.txt`
3. If you don't see it, you're in the wrong folder - go back to Step 3 and make sure you're in the `streamlit-app` folder

The Chatbot Won't Connect to the Server

Problem: The chatbot frontend can't reach the backend servers.

Solution:

- Make sure you have an internet connection
- Check if there's a file called `.env` in the `streamlit-app` folder with the correct server address
- Contact support if the issue persists

Browser Says "This site can't be reached"

Problem: The chatbot isn't running yet.

Solution:

1. Check the Command Prompt/Terminal window - do you see "You can now view your Streamlit app"?
2. If not, run `streamlit run app.py` again
3. Wait 10-15 seconds for it to start up
4. Try refreshing your browser (press F5 or Command + R)

▮ Need Help?

If you're stuck and these steps didn't work:

1. **Take a screenshot** of any error messages you see
2. **Note which step you're on**
3. **Contact support** with:
 - What operating system you're using (Windows 10, Windows 11, Mac)
 - The step number where you got stuck
 - The error message (screenshot is helpful!)
 - What you've already tried

▮ Understanding What You Did

You just learned how to:

- ✓ Install Python (a programming language)
- ✓ Use the command line/terminal (like a text-based control center)
- ✓ Install software libraries (like adding apps to your phone)
- ✓ Run a web application locally (on your own computer)

This is actually a pretty technical skill! Many professional programmers do exactly these steps every day. Well done! ▮

▮ Quick Tips

- **Bookmark this guide** - You might need it again
- **Keep the chatbot folder** in an easy-to-find location (Desktop is good)
- **Remember:** You only install Python and libraries once, but you run `streamlit run app.py` every time you want to use the chatbot
- **Don't move files** inside the `streamlit-app` folder - the chatbot needs them exactly where they are

That's it! You're all set. Enjoy using your chatbot! ▮
